Dear Dr. Lederberg;

We have two strains of staphylococci which we have isolated from chickens. We wish to find a strain of bacteriophage which is lytic to one or both of these strains. Your name has been referred to me as one who is actively engaged in phage investigation. Do you by any chance have a strain of bacteriophage which might be lytic for staphylococci? If you do, I would appreciate receiving a sample of the same.

Sincerely yours,

*T. W. Millen*
